## LATEST PROJECTS

**leetrboo**                                                                        Live Site | Source Code
Engineered a full-stack leaderboard application to manage competitive events, implementing secure OAuth authentication.
*Technologies Utilized*: HTML, Bootstrap, CSS, TypeScript, React, Node.js, SST, OAuth, PostgreSQL, AWS

**Teach League**                                                                   Live Site | Source Code
Developed and deployed an AI-powered educational platform that streamlines curriculum access for teachers, integrating multiple Google APIs and implementing secure user authentication.
*Technologies Utilized:* HTML, Bootstrap, CSS, JavaScript, React, Node.js, Express, Redux, Google Firestore, Google Firebase Auth, GitHub, Google Classroom API, Google Gemini API

**Body Therapy Arts**                                                              Live Site | Source Code
Architected and launched a responsive single-page application for healthcare practitioners, featuring location services through Google Maps integration.
*Technologies Utilized*: HTML, Bootstrap, CSS, TypeScript, React, Node.js, Express, Google Maps API

**Class Dashboard**                                                                Live Site | Source Code
Built a comprehensive and individualized student success platform that supports academic success.
*Technologies Utilized:* HTML, Bootstrap, CSS, JavaScript, React, Redux, Node.js, Express, Google Calendar API

## EXPERIENCE

**Software Engineer**, ReSight Inc.                                       December 2024 - Present
Provide report generation and data collection. Develop and maintain responsive web applications using React and TypeScript. Collaborate with cross-functional teams to implement new features and optimize the existing codebase. Contribute to code reviews and technical documentation. Deploy and monitor applications using AWS services.

**Software Engineer**, Freelance                                          December 2019 - Present
Design and develop custom web solutions for diverse client needs. Lead client consultations to gather requirements and provide technical recommendations. Implement responsive designs and ensure cross-browser compatibility. Manage project timelines and deliverables independently.

**Co-Organizer**, Boulder JavaScript Group                                June 2024 - Present
Facilitate bi-weekly meetings of JavaScript enthusiasts. Secure meeting spots. Foster sponsorships. Support mentoring.

**Computer Science Teacher**, September High School               December 2015 - December 2024
Managed projects that automated data collection and generated reports for each student. Taught a range of social studies classes. Selected to join the 21st Century Teacher Cohort to develop and lead technology integration into the classroom and awarded a budget of nearly $6,000 for technology tools. Created an app that generated reports for each student. This initiative saved September School $4,480 in costs and nearly 150 hours of work for educators.

## EDUCATION & LICENSURE

Nucamp honor-level certification in frontend web and mobile development with emphasis on React and React Native
Lewis & Clark College Master of Arts in Teaching
St. John's College Bachelor of Arts in Liberal Arts
Colorado Professional Teacher License #240550

## TECHNICAL COMPETENCIES

AWS, CI/CD, CSS, Express, Firebase, Git, GitHub, GraphQL, JavaScript, JSON, JSX, Mantine UI, Node.js, NoSQL, React, React Native, PostgREST, PostgreSQL, Python, Redux, RESTful web services, Ruby, Ruby on Rails, Semantic HTML, SolidJS, SST, Supabase, TypeScript
