Computer science teacher with 17 years in classrooms who designs and ships AI-powered products for educators. I find the problem with the people who have it, prototype in working code with AI agents, and keep a human review step before anything reaches a student. 2026 CSTA Responsible AI Fellow (1 of 15 selected nationally).

PRODUCT WORK

Teach League · AI lesson planning and gradebook for teachers

teachleague.com

- Designed planning around one question ("What do you want your students to know?") and grounded AI generation in standards, accommodations and curriculum I've curated over 17 years, instead of open-ended prompting.
- Built a gradebook report on Credible's semantic data layer that leads with a weekly priority queue; one report contract powers both the dashboard and its AI assistant so they never disagree.

Missing Voices · text analysis for missing perspectives

missingvoices.app

- Helps students see whose voices their research includes, sidelines or leaves out. In my AP CS Principles essay unit, scores on "uses a wide range of reputable sources" rose 34% from draft to revision; two English colleagues adopted the protocol.

Memnon · voice-first capture for teachers

memnon.app

- Shipped voice capture, saved results, suggested threads and feedback through reviewed pull requests (115 tests). Redesigned feedback from four labels to a binary choice after a user-burden review.

leetr.bo · live leaderboard for school events

leetr.bo

- Replaced paper scoring for my school's Halloween costume contest: contestants join by code, their chosen video plays on stage beside the live standings, and scores save as they're entered. Redesigned in 2026 for projectors and phones.

EXPERIENCE

Computer Science Teacher, Jefferson Academy

June 2025 to present

- Teach six quarter-long technology pathways (web design, JavaScript, AI entrepreneurship, game design, cybersecurity, robotics), plus AP Computer Science Principles and AP Computer Science A (first year teaching both), about 80 students a quarter.
- Built an AI-assisted feedback workflow with human approval steps: line-level feedback on student code, and it catches errors in my own assignments before they cost students points.
- Helped lead the technology committee's school-wide responsible AI guidance; coach colleagues on bringing AI into their teaching.
- Sponsor, Jefferson Academy Computer Science Honor Society, 2025-26 to present.

Software Engineer (contract), ReSight Inc.

Dec 2024 to June 2025

- Built report generation and data collection features in React and TypeScript; deployed and monitored on AWS; contributed to code reviews and documentation.

Computer Science and Social Studies Teacher, September School

Dec 2015 to Dec 2024

- Built an app that automated data collection and generated individual progress reports for every student, saving the school \$4,480 and nearly 150 hours of educator work.
- Dean of Discipline (2023): resolved conflicts through restorative justice with students, staff and families. Mentor teacher for student teachers.

Curriculum Designer, Boulder County Latino History Project, CU Boulder

Dec 2014 to present

- Nominated to a leadership group studying local Latino history; hired to create curriculum that teachers use in their classrooms.

Co-Organizer, BoulderJS

June 2024 to present

- Run monthly meetups: venues, sponsors and speakers, including bringing Credible in as sponsor and presenter.

Software Engineer, Freelance (Dec 2019 to present): custom web solutions from client consultation through responsive delivery.

Earlier teaching: Social Studies and Language Arts, Boulder Valley School District (2012 to 2015; 21st Century Teacher cohort, led technology integration and professional training) and Mapleton Public Schools (2010 to 2012). Director of Education, Boys & Girls Club, Portland (2007 to 2008).

EDUCATION, LICENSURE AND RECOGNITION

- 2026 Responsible AI Fellow, CSTA (1 of 15 selected nationally)
- CODIE Awards judge (edtech) · ISTE+ASCD AI Deep Dive
- MA in Teaching, Lewis & Clark College (2009) · BA, St. John's College (2006)
- Nucamp Certificate of Honor, Front End Web and Mobile Development
- Colorado Professional Teacher License #240550 · Spanish, Hebrew

SKILLS

Product: user research with students and teachers, curriculum design, prototyping in code, testing with real users, AI agent workflows (Claude Code, Codex, MCP)

Engineering: TypeScript, React, Node.js, Python, PostgreSQL, Supabase, Firebase, AWS
